

Advanced Volume on the ISEE Middle and Upper Level

LESSON GOAL: Solve multi-step problems that involve the volume of a figure.

ISEE Middle-Level Volume Question:

The surface area of a cube is 150 centimeters. What is its volume?

A) 5 cm³
B) 25 cm³
C) 100 cm³
D) 125 cm³

The solution:

Step 1: Work backwards from the surface area to determine the length of each side of your cube. Since the cube has 6 faces, we can divide the surface area by 6 to get the area of each face. Find its square root to get the side length:

 $150 \div 6 = 25; \sqrt{25} = 5$

Step 2: Find the volume by taking the side length, 5, to the third power. The answer is D.

 $5 \times 5 \times 5 = 125$

ISEE Upper-Level Volume Question:

The height of the cylinder shown is 5 times its diameter. The formula used to find the volume of a cylinder is $V = \pi r^2 h \sigma V = r^2 h \pi$ where r is the radius of the cylinder and h is the height of the cylinder. If the diameter of the cylinder is 4 in., what is its volume, in inches³?

A)	80п
B)	100п
C)	160п
D)	320п

Helpful tip: Since you don't get a calculator, the ISEE usually provides numbers that are easy to work with, such as perfect squares. If you find yourself doing a complicated calculation, double check your work before continuing.

Helpful tip: Don't stop before you're finished! The test is tricky and often offers partial solutions, like A and B, as answer choices.

Helpful tip: If you see an unfamiliar figure on the test and you don't know the formula, don't panic! The ISEE often gives the formula for a less common figure within the problem. That said, it's important to memorize common formulas, such as the volume of cubes and rectangular prisms.

Step 1: Use the information in the problem to figure out each variable in the formula: r = half the diameter: $4 \div 2 = 2$ in. h = 5 times the diameter: $4 \times 5 = 20$ in. *Helpful tip:* Don't mix up diameter and radius! The test often gives you one of these measures when you need the other one to solve the problem.

Step 2: Plug each variable into the equation and solve: $V = r^2h\pi = 2^2 \ge 20 \ge \pi = 80\pi$. The correct answer is A.
